

inMailX®

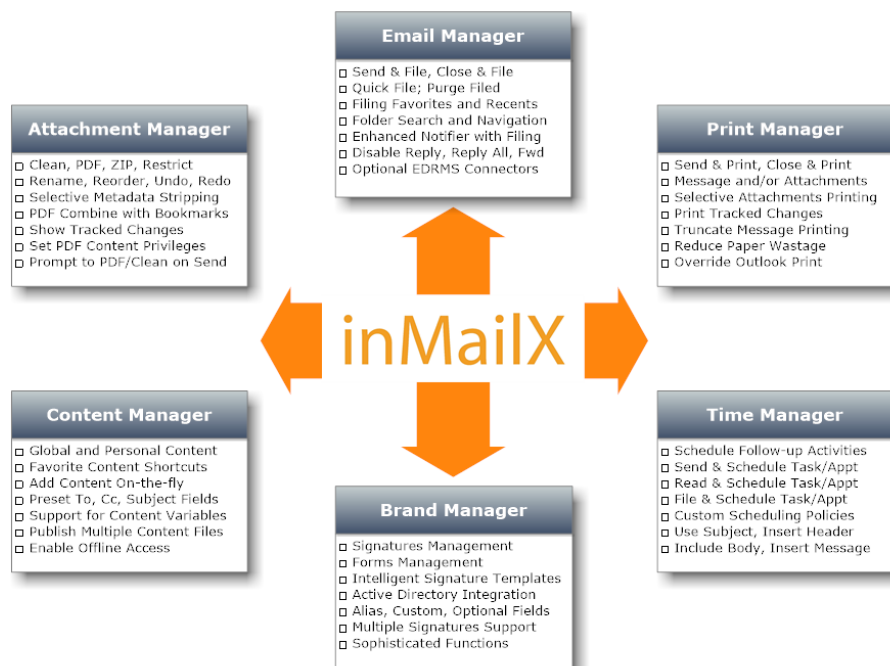

Enterprise Email Management, Compliance and Productivity

Introduction

inMailX is an integrated email management, compliance and productivity solution for Microsoft Outlook, which brings together features and functionality that enable users to effectively manage their emails and attachments, improve their email filing compliance, and enhance their productivity.

When used with its optional connectors, inMailX streamlines and enhances the user experience when filing emails and attachments into third party electronic documents and records management systems, such as HPE Records Manager, iManage/Worksite, NetDocuments, SharePoint, Worldox, Network or Cloud folders.

inMailX modular architecture enables organizations to easily deploy and gradually activate the modules that add immediate benefits to their users and business processes.

inMailX scales easily to meet the needs of virtually any organization.

As new users are created, they automatically receive enhanced emails management functionality, efficient attachments Clean, PDF, ZIP, Rename and Reorder tools, Global content, personalised email signatures, so that they can immediately become productive with inMailX.

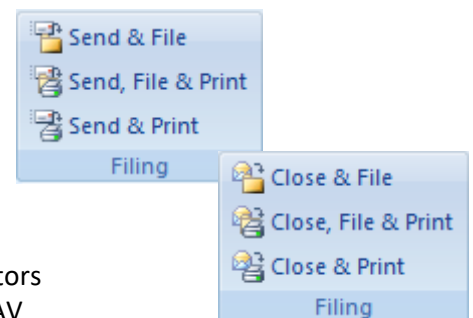

Modular Features and Functionality

inMailX empowers users to become more productive and responsible when processing emails and attachments in Microsoft Outlook. In addition, inMailX will assist organisations with reducing administration overheads, and enforcing corporate policies to improve compliance.

The combined features and functionality of all inMailX modules include:
